

iPhone/iPad for Low Vision

Adjusting the Brightness

Sometimes, just a small change in your screen's brightness can end up making a huge difference!

If you have issues with glare or just need a little more light, adjusting the brightness on your Apple device is a big help! **Try it out!**

Tip: The following instructions are for the iPad. However, they are very similar whether you're using an iPad, iPhone, or even an iPod Touch.

Adjusting Brightness

1. Tap the **Settings** app on your device **Home** screen.
2. Tap **Display & Brightness** in the **Settings** list to see its settings.
3. Drag the slider bar in the **Brightness** settings to adjust your brightness. Dragging to the right increases the brightness and dragging to the left dims the brightness.

4. Your new brightness settings take effect in real time, helping to reduce eye strain.

Now you know how to adjust your device's brightness. Check out the other workshops in this series to learn more about customizing your iPhone or iPad for low vision.
