

iPhone/iPad for Low Vision

Setting Accessibility Shortcuts

Did you know that you can open accessibility shortcuts without going through the Settings app?

Your iPhone or iPad lets you create shortcuts to your most frequently used **Accessibility** options. Simply press your **Power/Side** button or **Home** button three times. **Try it out!**

Tip: The following instructions are for the iPad. However, they are very similar whether you're using an iPad, iPhone, or even an iPod Touch.

Setting Up an Accessibility Shortcut

1. Open the **Settings** app on your **Home** screen.
2. In the **Settings** list, tap **Accessibility**.
3. **Accessibility Shortcut** is at the bottom of the **Accessibility** settings list. Tap to open it.
4. Explore the list of accessibility options and tap to select one that you use often, like **Magnifier**.

A blue checkmark appears when an option is selected.

Tip: If you're not yet familiar with the built-in magnifier, check out the Magnifier workshop in this series.

5. Next, triple-press your **Power** or **Home** button to quickly open the shortcut option you chose.

Tip: You can choose more than one shortcut option from the Accessibility list. In that case, your triple-press would show a list of your selected options for you to choose from.

Now you know how to set accessibility shortcuts on your iPhone or iPad. Check out the other workshops in this series to learn more about customizing your iPhone or iPad for low vision.
