

Customizing Windows for Low Vision Icons

1. From anywhere on your computer, press **Windows + D** to navigate to the desktop.
2. Right click on any blank area on the desktop. This opens the **Context** menu. You can also use the keyboard shortcut **Shift + F10** to open the **Context** menu.
3. Use the mouse pointer and click to select **View**. You can also use the keyboard shortcut **V** for **View**.
4. Select **Large**, **Medium**, or **Small icons** using the **Up** or **Down arrow** keys to move through the list.
5. Select each size to see which works best for you. To return to the default, select **Medium icons**.

6. Another way to change the icon size quickly is to hold down the **CTRL** key and roll the mouse scroll wheel away from you to enlarge icon size, and toward you to decrease icon size. This method provides more customized size options than the menu choices.
