

Customizing Windows for Low Vision Mouse Pointer

1. From anywhere on your computer, open **Ease of Access** with **Windows + U**, for “Usable.”
2. Select **Mouse pointer** in the left pane
3. Under **Change pointer size and color**, click once on the slider bar control to select it. Use the **Right and Left arrow** keys, or click and drag with the mouse pointer, to move the slider control and demonstrate changing pointer size.
4. Under **Change pointer color**, select each of the first three options to see which works best for you.
5. Select **Custom Color**—the fourth option—to access more color choices.
6. Choose a color from **Suggested pointer colors**.
7. If none of the displayed colors work for you, click the **Pick a custom color** button.

8. Explore the colors until you find one you like. Then click the **Done** button.
9. Under **Change touch feedback**, make sure the **Touch Feedback** toggle switch is on. If it isn't, click on it to turn it on.
10. Click to check the box next to **Make visual feedback for touch points darker and larger**. If your device has a touch screen, this setting enhances the visual feedback for the touch points.
11. For more options for enhancing the mouse pointer, check out the workshop on Mouse Settings.
