

Alternate Method of Loading the Slate

You may find this method of loading the paper easier:

1. Hold the slate horizontally in front of you, with the frame holes facing up and the hinge to your left.

2. Open the top frame 90 degrees so that it forms an L shape, with the top frame pointing straight up.

continued...

3. Now tip the slate back away from you so that the top edge of the slate rests on the table.

4. Hold the paper upright. Put it between the two frames, against the bottom frame. Line up the left side of the paper with the hinge. The bottom edge of the paper will be against the table.

continued...

5. Close the slate firmly until you hear the click of the pins piercing the paper. Lay the slate back down on the table.

You are ready to write.
