

Creating a Drill Guide

A drill guide helps you drill straight into wood or other material. You can create a drill guide out of an empty sewing bobbin or an empty spool of thread.

Follow these steps:

- With an awl or dark marker, mark the spot on the wood (or other material) where you want to drill.
- Put the hole of the spool or bobbin on that spot.
- With the drill turned off, put the bit into the hole in the bobbin or spool of thread.
- Hold the bobbin or spool in place with a pair of pliers while you drill.
