Apple AirTags Low Vision

Finding Items Nearby

Apple AirTags are an easy way to find those things that so often go missing!

An AirTag is only about the size of a quarter, and there are many accessories available that let you attach one to your backpack, cane, umbrella, or keys. Or just slip one into your purse or luggage. Then use your iPhone, iPad, or iPod Touch to track these items down. **Try it out!**

Apple Device Settings

Before setting up your AirTag, there are a few things to do in the **Settings** app on your Apple device.

1. Make sure your device is running Apple's latest software.
2. Then turn on the following:
    - Location Services
    - Bluetooth
    - Find My

Now you're ready to find items nearby!

Using the Find My App

3. Tap the Find My app on your Apple device.
4. Tap the **Items** tab at the bottom of the screen. The top part of the screen shows a map of your location. Below that is a list of all your items.
5. Tap the item you want to find.
6. Tap **Play Sound**. The AirTag on your item begins to chime and **Play Sound** changes to **Stop Sound**. Tap **Stop Sound** when you've located your item.
7. If your item is in a different room and you can't hear the chime, tap **Find Nearby** on your device to open the **Find Nearby** screen. The bottom left of the screen shows you the distance to your item.
8. An arrow pointing at your item appears on the screen. Walk in the direction the arrow is pointing. You will see the distance get shorter. As you close in on your item, your device will also vibrate.

9. As you reach your item, an **AirTag** icon appears on the screen.

   Tip: If you don't see your item, it may be hidden under something else, like a blanket. Tap the Play Sound icon at the bottom right of your device screen to have the AirTag chime.

   Tip: If it is dark, a Flashlight icon also appears to help you search for your item.

10. Once you have found your item, tap the **Done** (**X**) icon at the bottom left of the screen. This brings you back to your item screen.

11. To get back to your **Items** list, tap the **X** below the map on your device screen.

12. Follow these steps again if you want to find another item.

Now you know how to use Apple AirTags to find items nearby. Check out the other workshops in this series to learn more about setting up and using AirTags.
