

Android TalkBack Screen Reader

Accessing the Quick Settings Menu with TalkBack

The **Quick Settings** menu on your Android phone allows you to access and adjust the options that you're likely to use most often.

You can view and change your Wi-Fi settings, connect to Bluetooth devices, restart or turn off your phone, and more. Here's how to access the **Quick Settings** menu from anywhere on your phone.

1. Use two fingers and swipe down the screen to open the **Notification Shade**.
2. Repeat this gesture again to open the **Quick Settings** menu.
3. Use the one-finger swipe gesture to move forward or back through the menu. When you're focused on the item you want to access, double tap to adjust that option.
4. When you're done making changes in the menu, simply tap the **Home** button in the navigation bar at the bottom of the screen to close the menu and return to the **Home Screen**.
