

iPhone/iPad VoiceOver

Three-Finger Gestures

You can quickly move through your device with three-finger gestures.

Use these three-finger gestures to move through your Apple device a little faster, copy text, use a privacy screen, and more. **Try these six gestures out!**

Tip: The following instructions are for the iPhone. However, they are very similar whether you're using an iPhone or an iPad.

1. **Three-finger single tap** has VoiceOver speak your item summary, which tells you where an item is located on your screen and how you can interact with it.
2. **Three-finger double tap** toggles mute on and off for VoiceOver.
3. **Three-finger triple tap** toggles the screen curtain on and off. Your screen goes dim or black, if you need some privacy and don't want others around you to see what's on your screen.

4. **Three-finger quadruple tap** has VoiceOver copy the last thing it said into any text field. You can paste it into a note, an email, or a text message.
5. **Three-finger swipe left and right** allows you to switch between screens or pages.
6. **Three-finger swipe up and down** allows you to quickly scroll up or down through a long list. For example, if you are in a list and want to move to an item at the bottom of the list, you could jump by larger increments through the list by using this gesture.

Now you have a simple way of quickly moving through your device with three-finger gestures. Try them out to see how they work for you. Then take another workshop to learn more.
