

iPhone/iPad VoiceOver

Four-Finger Gestures

You can quickly move through your device with four-finger gestures.

Use these four-finger gestures to move through your Apple device more efficiently. **Try these five gestures out!**

Tip: The following instructions are for the iPhone. However, they are very similar whether you're using an iPhone or an iPad.

Tip: If you're using an iPhone instead of an iPad, four-finger gestures might seem cramped. If so, just turn your fingers to an angle on your screen.

1. **Four-finger single tap** moves you to the first or last item on the screen depending on where you tap.

If you tap near the top of your screen, the VoiceOver focus is on the very first item on your screen.

If you tap near the bottom of your screen, the VoiceOver focus is on the very last item on your screen.

2. **Four-finger double tap** toggles in and out of help mode, where you can practice all the gestures you learned.
3. **Four-finger triple tap** opens Detection Mode for locating items around you, such as people, doors, text on signs, etc. Contact a Hadley learning expert for more information.
4. **Four-finger quadruple tap** opens VoiceOver settings so you can swipe through them to find the one you need.
5. **Four-finger swipe left and right** allows you to quickly move between all your recently used apps and is handy for copying and pasting text from one place to another.

Now you have a simple way of quickly moving through your device with four-finger gestures. Give another workshop a try to learn more.
