

Android: Low Vision

Remove Animations

Here's another setting for low vision on your Android phone or other device.

Animations like app icons moving across the home screen when you open and close them can be visually confusing. So turning them off will reduce visual clutter and actually let your apps load a little faster. **Try it out and see if it's helpful to you.**

1. On the home screen, tap the **Settings** app to open it.
2. Scroll down to the **Accessibility** settings. Tap the **Accessibility** option to see the settings.
3. Scroll down below the **Display** heading to find the **Color and motion** option and tap it.

Tip: Some phones might say **Text and display instead.**

4. Scroll down to **Remove animations** and tap the toggle switch to turn it on.

Tip: Turning on **Remove animations** affects only the device's motion effects; it will not affect videos, motion inside apps, or motion on websites.

Check out how this works on the home screen and in a few apps. Apps just close without looking like they fly back into place. How is it working for you?
