

Apple Watch Zoom

Learn how to magnify the display on your watch face.

With these simple gestures, you can zoom in or out and navigate around your watch face to view the text and graphics more clearly. **Give it a try!**

1. To begin, open the **Accessibility** settings in the **Apple Watch app** on your iPhone and make sure the **Zoom** setting is turned on.

Two-Finger Double Tap

2. To quickly zoom in to the default magnification setting, double tap your watch face using two fingers.
3. To quickly zoom back out to the regular display, double tap with two fingers again.

Two-Finger Drag

4. Double tap your watch face using two fingers to zoom in.

5. To move around the watch face while it's magnified, drag two fingers across the screen in any direction.

Drag to Zoom

6. To control the amount of magnification, use two fingers to double tap and hold. Keep your fingers on the watch face at the end of your second tap.
7. Next, slide your two fingers up the screen to increase magnification, or slide down to decrease magnification. When you have the magnification where you want it, lift your two fingers off the watch face.
8. Double tap with two fingers again to toggle between **Zoom** magnification and your regular view.

Tip: Each time you reset the magnification, the new setting becomes your default size. When you double tap to turn on Zoom, this is the magnification you'll see—until you change the default again.

Isn't it great to know you can access the Zoom feature anytime you need it? Be sure to check out the rest of the Apple Watch series to learn even more accessibility tips and tricks.
