

Seeing AI: Apple Low Vision Identifying Money

Use Seeing AI to help you identify money!

Seeing AI uses your device's camera to scan money and read its denomination. **Try it out!**

Tip: If you don't yet have the Seeing AI app, you can get it by going to the app store on your device and typing "Seeing AI" in the search field. Or contact a Hadley learning specialist for help.

Tip: This series is designed for people with low vision using Apple devices. If you use Android, go to the Seeing AI series for Android Low Vision. If you use your device with a screen reader, be sure to check out our series for using Seeing AI with VoiceOver on your iPhone, or TalkBack on your Android phone.

Scanning Money

1. Place a dollar bill, or any bill, on a flat surface.
2. Open the **Seeing AI** app.
3. Tap the **More** tab near the bottom right of your screen.
4. The channel bar appears with a default focus on the **Product** channel. Tap the **Currency** icon near the center. It looks like a dollar bill.

5. Hold your phone above the bill with the camera facing down.
6. Seeing AI quickly tells you the denomination of your bill.

Tip: Your bill doesn't have to be on a flat surface for Seeing AI to identify it. When you're at the check-out in the grocery store, hold the bill out in front of you (it doesn't matter which side of the bill is facing you) and Seeing AI will quickly identify it for you.

Now that you know how to identify money, check out the other workshops in the Seeing AI series.
